Készítse el az alábbi *balra* függvényt, melynek feladata, hogy a paraméterként kapott *fajl* szövegfájl tartalmát *max* karakter szélességben megjeleníti a szabvány kimeneten, balra igazítva! Nem kell attól tartania, hogy a szövegfájlban *max*-nál hosszabb szavak lesznek.

Szintaktikai hiba esetén a fordító által jelzett sor számából vonjon ki 10-et, hogy megkapja a szerkesztőben olvasható sorszámot!

For example:

Test	Result
<code>balra("prince_intro.txt", 45);</code>	<p>THE LITTLE PRINCE</p> <p>Antoine De Saint-Exupery</p> <p>Once when I was six years old I saw a magnificent picture in a book, called True Stories from Nature, about the primeval forest. It was a picture of a boa constrictor in the act of swallowing an animal. Here is a copy of the drawing.</p> <p>In the book it said: "Boa constrictors swallow their prey whole, without chewing it. After that they are not able to move, and they sleep through the six months that they need for digestion." I pondered deeply, then, over the adventures of the jungle. And after some work with a coloured pencil I succeeded in making my first drawing. My Drawing Number One. It looked like this:</p> <p>I showed my masterpiece to the grown-ups, and asked them whether the drawing frightened them. But they answered: "Frighten? Why should any one be frightened by a hat?" My drawing was not a picture of a hat. It was a picture of a boa constrictor digesting an elephant. But since the grown-ups were not able to understand it, I made another drawing: I drew the inside of the boa constrictor, so that the grown-ups could see it clearly. They always need to have things explained.</p>
